

Perfection is Standard

The proper care of stainless steel

Spray stainless steel cleaner onto the surface generously (spray distance 4 in.) and wipe clean with a dry MWE microfiber cloth.

Repeat the process if streaking occurs.

The MWE stainless steel cleaner prevents stubborn dirt.

To clean small surfaces, spray the stainless steel cleaner directly onto the MWE microfiber cloth to protect surroundings from being effected by the mist of the spray.

Proper care of polished stainless steel

Stainless steel surfaces can be cleaned with all non-abrasive cleaners. The most gentle detergent is water.

Prior to any further treatment, the stainless steel parts should always be rinsed with plenty of water to remove dust, sand and other particles that would scratch the surface during polishing.

Water with the addition of a commercially available dishwashing detergent, or first undiluted dish-washing detergent and then plenty of water, normally eliminates any soiling.

For heavy soiling we recommend standard polishing pastes.

NOT SUITABLE FOR CLEANING

- Any mechanical cleaning devices such as scrapers, wire brushes and steel wool
- Any type of abrasives or harsh chemicals
- Chrome, silver and brass cleaning products
- Furniture polish other products specified for "shining a surface" (a wax film forms)

Do not use on polished surfaces
